

# SNOW-ICE CONTROL INFORMATION and PROCEDURES

## City of Bonney Lake Snow Removal Plan:

**Snow Plowing:** Public Works crews will clear snow from priority roads first. **Priority roads include those around hospitals and schools, on main arteries, and on hills/steep slopes.** We try to have all roads cleared as quickly as possible. We treat a snow storm as an emergency and overtime is started as soon as it is needed. All available trucks are put to work.

**Ice Control:** Sanding starts when icy conditions warrant application of traction assistance. Sand is applied only on hills, on the stop lanes at intersections, and where requested by the police department. Snow plowing starts on steep slopes when accumulations of one or more inches of snow occurs to minimize ice formation.

## Residents and Drivers Can Help Themselves by Using the Following Information:

1. **Park all vehicles, trailers, and boats off of streets, until the snow is removed.** Ridges of snow around vehicles parked on streets will freeze and prevent or slow down future snow removal and may cause accidents when any vehicle hits them.
2. **Clear snow from side walks as soon as possible, but not later than 12 hours after snow has ceased to fall.** This is to prevent the snow from turning into an icy hazard for pedestrians, or forces them to walk in the street.
3. **Do not place snow removed from driveways or sidewalks onto the street.**
  - Aim snow blowers into front yards away from sidewalks, the park strip and the street. Ice and rocks, as well as powder snow are blown out many feet. This material can hit parked or passing cars, which can cause damage to those vehicles as well as possible accidents. Also, snow blown onto the street will freeze and become a slick spot, which may easily cause accidents.
  - Place snow, shoved into your driveways by snow plows, onto the area between your sidewalk and curb, the park strip; but, not into the street or gutter. Otherwise, if this pile of snow is shoved back into the street, it will freeze and become hidden by new snow. Then, when snowplows or other vehicles hit that pile of ice, they can be shoved back into the traffic lanes and can easily hit passing or parked cars. Also, placing this snow into the gutter will slow down or block drainage.
4. **Give sand spreader and snowplow vehicles plenty of room.** Don't follow too closely - equipment could slide sideways or backwards at any time. Don't pass these vehicles if you can avoid it. Be patient!
5. **Drive Defensively!** Salt/sand trucks will generally only be used on hills and intersections. Other areas will remain icy. Slow down and increase distance from the vehicle in front of you. Four wheel vehicles may help gain traction initially; but, once you start sliding, 4-wheel vehicles are no better than any other!
6. **Volunteer your services.** Help your neighbors who can't clear their own driveways and sidewalks.
7. **Remove snow from around fire hydrants near your home.** Help save lives and property!
8. **Clear snow from around mailboxes.** Sometimes snowplow crews will not push snow all the way to the curb and will block access to the mailbox. Alternatively, consider use of a temporary mail box until the snow melts.
9. If you have any questions, please call the Public Works Department at 447-4341.
